

Project Overview

Quantivo is a modern multi-business management and POS platform designed to help shop owners manage operations, sales, inventory, customers, analytics, subscriptions, and business growth from a single dashboard.

Main Screens UI Documentation

1. Landing Page

The landing page is designed to introduce Quantivo to potential users and explain the platform's value proposition.

Hero Section

The Hero Section is the first section of the landing page that introduces Quantivo to users. It contains the main heading, short platform description, dashboard preview, and call-to-action buttons to encourage users to explore or sign up.

Featured Section

The Featured Section highlights the main features and capabilities of Quantivo such as sales management, inventory tracking, analytics, customer handling, and reporting. It helps users quickly understand the core functionalities of the platform.

About Quantivo Section

This section provides a brief introduction about Quantivo, its purpose, and how it helps businesses manage operations more efficiently. It explains the platform's mission and overall business value.

Clients That Trust Us Section

The Clients Section showcases trusted businesses, partners, or brands using Quantivo. It is designed to build credibility and increase user trust by displaying client logos, testimonials, or business statistics.

Pricing Section

The Pricing Section displays the available subscription plans offered by Quantivo. It includes plan comparison, pricing details, features included in each package, and upgrade options for users.

CTA (Call To Action) Section

The CTA Section encourages users to take action such as starting a free trial, creating an account, or contacting the team. It is designed to increase conversions using strong messaging and action buttons.

Footer Section

The Footer Section contains additional navigation links, contact information, social media links, company details, and quick access to important pages or resources.

2. Authentication Screens

Login Screen

The Login Screen allows existing users to securely access their Quantivo account using email and password credentials. It is designed with a clean and minimal interface for a simple authentication experience.

Signup Screen

The Signup Screen allows new users to create an account and join the Quantivo platform by entering their basic account details. It provides a smooth and user-friendly onboarding experience with a modern UI design.

3. Main Dashboard Screens

Products

The Products tab is used to manage all products available in the business inventory. Users can add new products, edit product information, update pricing, manage stock quantities, and organize product details. This section acts as the central product management area of the platform.

Categories

The Categories tab helps organize products into groups or collections. This makes product management easier and improves filtering, searching, and reporting. Users can create, edit, or remove categories based on their business structure.

Sales

The Sales tab is responsible for managing daily sales activities and transactions. Users can track orders, monitor completed sales, review transaction history, and analyze sales performance. This section provides a clear overview of business revenue and ongoing sales operations.

Purchases

The Purchases tab manages all supplier purchase records and stock intake operations. Businesses can monitor purchased inventory, track purchase history, and maintain supplier-related transaction records. This helps maintain accurate inventory flow.

Customers

The Customers tab stores customer-related information including customer profiles, purchase history, and transaction records. It helps businesses track customer activity and improve customer relationship management.

Suppliers

The Suppliers tab is used to manage supplier and vendor information. Users can store supplier details, monitor supply records, and maintain supplier relationships for inventory and purchasing operations.

Sales Report

The Sales Report section provides detailed insights into sales performance. It includes total sales summaries, transaction analytics, revenue tracking, and sales trends. Businesses can use this report to monitor overall sales growth and performance.

Stock Report

The Stock Report displays inventory-related information such as available stock, low-stock items, and stock movement. This helps businesses maintain inventory accuracy and avoid stock shortages.

Profit Report

The Profit Report focuses on business profitability by showing profit calculations, revenue analysis, and financial performance summaries. It helps users understand overall business growth and operational success.

Settings

The Settings tab allows users to configure the application according to their business requirements. It includes system preferences, business configurations, operational settings, and platform customization options.

Profile

The Profile tab allows users to manage personal account information such as name, email, profile image, password, and account preferences. This section is focused on user account management.

Billing

The Billing tab displays subscription payment details, billing history, invoices, and transaction records. Users can monitor payment status and manage financial subscription activities from this section.

Manage Plan

The Manage Plan section allows users to view their currently active subscription plan, including plan details, joining date, expiry date, renewal information, and available upgrade options. Users can compare plans and upgrade their subscription based on business requirements.

Database Schema Documentation

1. User Schema

Stores all system users such as owners, admins, and employees.

Attribute	Type	Description
_id	string pk	Unique user ID
name	string	Full name of user
email	string	User login email
password	string	Hashed password
role	string	User role (Owner, Admin, Staff)
shopId	string fk	Reference to shop
createdAt	date	Account creation date

Relationship

user.shopId > shop._id

2. Shop Schema

Stores business/shop information.

Attribute	Type	Description
_id	string pk	Unique shop ID
shopName	string	Business/shop name
ownerId	string fk	Shop owner user ID
logo	string	Shop logo image
phone	string	Business contact number
address	string	Business address
totalEmployees	string	Number of employees
businessType	string	Type of business
subscriptionPlan	string	Current plan name
subscriptionStatus	string	Subscription state
createdAt	date	Shop creation date

Relationship

shop.ownerId > user._id

3. Categories Schema

Stores product categories.

Attribute	Type	Description
_id	string pk	Unique category ID
shopId	string fk	Related shop
name	string	Category name
description	string	Category details
icon	string	Category icon
status	string	Active/Inactive
createdAt	date	Creation date

Relationship

categories.shopId > shop._id

4. Products Schema

Stores all products/inventory items.

Attribute	Type	Description
_id	string pk	Unique product ID
shopId	string fk	Related shop
categoryId	string fk	Related category
name	string	Product name
description	string	Product details
image	string	Product image
purchasePrice	number	Buying price
sellingPrice	number	Selling price
stock	number	Current stock quantity
status	string	Product status
createdAt	date	Creation date

Relationships

products.shopId > shop._id

products.categoryId > categories._id

5. Customers Schema

Stores customer information.

Attribute	Type	Description
_id	string pk	Unique customer ID
shopId	string fk	Related shop
name	string	Customer name
phone	string	Customer phone
email	string	Customer email
address	string	Customer address
createdAt	date	Creation date

Relationship

customers.shopId > shop._id

6. Sales Schema

Stores invoice and billing information.

Attribute	Type	Description
_id	string pk	Unique sale ID
shopId	string fk	Related shop
customerId	string fk	Related customer
soldBy	string fk	User who created sale
invoiceNumber	string	Invoice number
totalItems	number	Total product count
subtotal	number	Amount before tax
discount	number	Discount amount
totalAmount	number	Final bill amount
paymentMethod	string	Payment type
paymentStatus	string	Paid/Pending
orderStatus	string	Completed/Cancelled
notes	string	Extra notes
billDate	date	Invoice date
dueDate	date	Payment due date
createdAt	date	Creation date

Relationships

sales.shopId > shop._id

sales.customerId > customers._id

sales.soldBy > user._id

7. Sale Items Schema

Stores products inside a sale.

Attribute	Type	Description
_id	string pk	Unique sale item ID
saleId	string fk	Related sale
productId	string fk	Related product
quantity	number	Product quantity
purchasePrice	number	Product buying price
sellingPrice	number	Product selling price
discount	number	Item discount
total	number	Final item total

Relationships

saleItems.saleId > sales._id

saleItems.productId > products._id

8. Expenses Schema

Stores business expenses.

Attribute	Type	Description
_id	string pk	Unique expense ID
shopId	string fk	Related shop
createdBy	string fk	User who created expense
title	string	Expense title
category	string	Expense category
amount	number	Expense amount
paymentMethod	string	Payment type
notes	string	Extra notes
createdAt	date	Creation date

Relationships

expenses.shopId > shop._id

expenses.createdBy > user._id

9. Suppliers Schema

Stores supplier/vendor information.

Attribute	Type	Description
_id	string pk	Unique supplier ID
shopId	string fk	Related shop
name	string	Supplier name
contactPerson	string	Main representative
phone	string	Supplier phone
email	string	Supplier email
address	string	Supplier address
company	string	Company name
status	string	Active/Inactive
createdAt	date	Creation date

Relationship

suppliers.shopId > shop._id

10. Purchases Schema

Stores supplier purchase bills.

Attribute	Type	Description
_id	string pk	Unique purchase ID
shopId	string fk	Related shop
supplierId	string fk	Related supplier
purchasedBy	string fk	User who created purchase
billNumber	string	Purchase bill number
totalItems	number	Total purchased items
subtotal	number	Amount before discount
discount	number	Discount amount
totalAmount	number	Final bill amount
paidAmount	number	Paid amount
dueAmount	number	Remaining due
paymentStatus	string	Paid/Partial/Unpaid
purchaseStatus	string	Received/Pending
createdAt	date	Creation date

Relationships

`purchases.shopId > shop._id`

`purchases.supplierId > suppliers._id`

`purchases.purchasedBy > user._id`

11. Purchase Items Schema

Stores products inside purchases.

Attribute	Type	Description
_id	string pk	Unique purchase item ID
purchaseId	string fk	Related purchase
productId	string fk	Related product
quantity	number	Purchased quantity
purchasePrice	number	Product buying price
discount	number	Item discount
totalAmount	number	Final item total

Relationships

`purchasesItems.purchaseId > purchases._id`

`purchasesItems.productId > products._id`

12. Plans Schema

Stores available subscription plans.

Attribute	Type	Description
_id	string pk	Unique plan ID
name	string	Plan name
description	string	Plan details
price	number	Plan price
billingCycle	string	Monthly/Yearly
maxProducts	number	Product limit
maxUsers	number	User limit
reportsAccess	boolean	Reports access
analyticsAccess	boolean	Analytics access
inventoryManagement	boolean	Inventory feature
billingAndInvoicing	boolean	Billing feature
lowStockAlerts	boolean	Stock alerts
prioritySupport	boolean	Premium support
dataBackup	boolean	Backup feature
emailSupport	boolean	Email support
status	string	Active/Inactive
createdAt	date	Creation date

13. Subscriptions Schema

Stores shop subscriptions.

Attribute	Type	Description
_id	string pk	Unique subscription ID
shopId	string fk	Related shop
planId	string fk	Related plan
startDate	date	Subscription start
nextBillingDate	date	Next billing date
expiryDate	date	Expiry date
paymentMethod	string	Payment type
amount	number	Paid amount
status	string	Active/Expired
createdAt	date	Creation date

Relationships

subscriptions.shopId > shop._id

subscriptions.planId > plans._id

API Routes Documentation

Base URL

- /api/v1

Authentication Routes

Register User

- POST /api/v1/auth/signup

Creates a new user account.

Login User

- POST /api/v1/auth/login

Authenticates user and returns JWT token.

Logout User

- POST /api/v1/auth/logout

Logs out authenticated user.

Get Current User

- GET /api/v1/auth/me

Returns logged-in user details.

Shop Routes

Create Shop

- POST /api/v1/shops

Creates a new shop.

Get Shop Details

- GET /api/v1/shops/:id

Returns shop information.

Update Shop

- PUT /api/v1/shops/:id

Updates shop details.

Delete Shop

- DELETE /api/v1/shops/:id

Deletes a shop.

Category Routes

Create Category

- POST /api/v1/categories

Creates a product category.

Get All Categories

- GET /api/v1/categories

Returns all categories.

Get Single Category

- GET /api/v1/categories/:id

Returns category details.

Update Category

- PUT /api/v1/categories/:id

Updates category.

Delete Category

- DELETE /api/v1/categories/:id

Deletes category.

Product Routes

Create Product

- POST /api/v1/products

Creates a new product.

Get All Products

- GET /api/v1/products

Returns all products.

Get Single Product

- GET /api/v1/products/:id

Returns product details.

Update Product

- PUT /api/v1/products/:id

Updates product details.

Delete Product

- DELETE /api/v1/products/:id

Deletes product.

Customer Routes

Create Customer

- POST /api/v1/customers

Creates a customer.

Get All Customers

- GET /api/v1/customers

Returns all customers.

Get Single Customer

- GET /api/v1/customers/:id

Returns customer details.

Update Customer

- PUT /api/v1/customers/:id

Updates customer.

Delete Customer

- DELETE /api/v1/customers/:id

Deletes customer.

Supplier Routes

Create Supplier

- POST /api/v1/suppliers

Creates supplier.

Get All Suppliers

- GET /api/v1/suppliers

Returns all suppliers.

Get Single Supplier

- GET /api/v1/suppliers/:id

Returns supplier details.

Update Supplier

- PUT /api/v1/suppliers/:id

Updates supplier.

Delete Supplier

- DELETE /api/v1/suppliers/:id

Deletes supplier.

Purchase Routes

Create Purchase

- POST /api/v1/purchases

Creates purchase bill and purchase items.

Get All Purchases

- GET /api/v1/purchases

Returns all purchases.

Get Single Purchase

- GET /api/v1/purchases/:id

Returns purchase details.

Update Purchase

- PUT /api/v1/purchases/:id

Updates purchase.

Delete Purchase

- DELETE /api/v1/purchases/:id

Deletes purchase.

Sales Routes

Create Sale / Invoice

- POST /api/v1/sales

Creates sales invoice and sale items.

Get All Sales

- GET /api/v1/sales

Returns all sales.

Get Single Sale

- GET /api/v1/sales/:id

Returns invoice details.

Update Sale

- PUT /api/v1/sales/:id

Updates sale.

Delete Sale

- DELETE /api/v1/sales/:id

Deletes sale.

Expense Routes

Create Expense

- POST /api/v1/expenses

Creates business expense.

Get All Expenses

- GET /api/v1/expenses

Returns all expenses.

Get Single Expense

- GET /api/v1/expenses/:id

Returns expense details.

Update Expense

- PUT /api/v1/expenses/:id

Updates expense.

Delete Expense

- DELETE /api/v1/expenses/:id

Deletes expense.

Plans Routes

Get All Plans

- GET /api/v1/plans

Returns all subscription plans.

Get Single Plan

- GET /api/v1/plans/:id

Returns plan details.

Subscription Routes

Create Subscription

- POST /api/v1/subscriptions

Creates shop subscription.

Get Current Subscription

- GET /api/v1/subscriptions/current

Returns active subscription.

Get All Subscriptions

- GET /api/v1/subscriptions

Returns all subscriptions.

Cancel Subscription

- PUT /api/v1/subscriptions/:id/cancel

Cancels subscription.

Dashboard Analytics Routes

Dashboard Overview

- GET /api/v1/dashboard/overview

Returns dashboard metrics.

Sales Report

- GET /api/v1/reports/sales

Returns sales analytics.

Stock Report

- GET /api/v1/reports/stock

Returns inventory analytics.

Profit Report

- GET /api/v1/reports/profit

Returns profit analytics.

Profile Routes

Get Profile

- GET /api/v1/profile

Returns logged-in user profile.

Update Profile

- PUT /api/v1/profile

Updates user profile.

Change Password

PUT /api/v1/profile/change-password

Changes account password.
